

FABRICATION

Offshore Wind Energy

A HEEREMA COMPANY

Building on a clean energy future!

For many decades Heerema Fabrication Group (HFG) has been serving the oil & gas industry to build large and complex offshore structures to safely operate at greater depths and in tougher environments, like the North Sea, West Africa and Mediterranean. Today we are leveraging our EPC(I) capabilities into the offshore wind energy market.

We enjoy a reputation for state-of-the-art engineering, fabrication and project management. The close involvement of our engineers and managers in all phases of a project, ensure execution of EPC(I) (Engineering, Procurement, Construction and Installation) contracts of high quality and on-time delivery.

Offshore wind energy is rapidly expanding and is growing year by year. Encouraged by the various Governmental strategies to increase sustainable energy production, offshore wind farms will become an important source of our energy in the near future.

Heerema Fabrication Group an experienced partner

HFG's experience in the offshore industry together with our EPC(I) capabilities have resulted in a number successfully executed offshore wind projects. Together with our engineering firm HFG Engineering we successfully completed offshore substation platforms, as well as offshore HVDC-converter platforms for the largest wind farm developments in the North Sea.

The three production locations, all situated around the North Sea, are equipped with large prefabrication and assembly halls for indoor construction and are capable of handling several large projects simultaneously.

Our expertise includes conceptual design, front-end engineering, fabrication-driven detailed design, fabrication, (pre)commissioning, transportation, installation and offshore hook-up. The knowhow gained in the offshore industry in the harsh North Sea environment combined with the dedication and professionalism of our people are the best guarantee for a project's success.

Our EPC(I)-services to the offshore wind energy market

For our clients in the offshore wind energy market Heerema Fabrication Group offers Engineering, Procurement, Construction and Installation (EPC(I))-services and Project Management to realize complete projects for offshore HVDC-converter platforms.

At HFG we provide innovative, practical and cost effective engineering and fabrication solutions to meet the ever advancing technical requirements of the offshore wind energy. By closely co-operating with our clients we are able to integrate various components and new technologies into a concept that meets our clients' needs.
