

# Main Office HMC Leiden

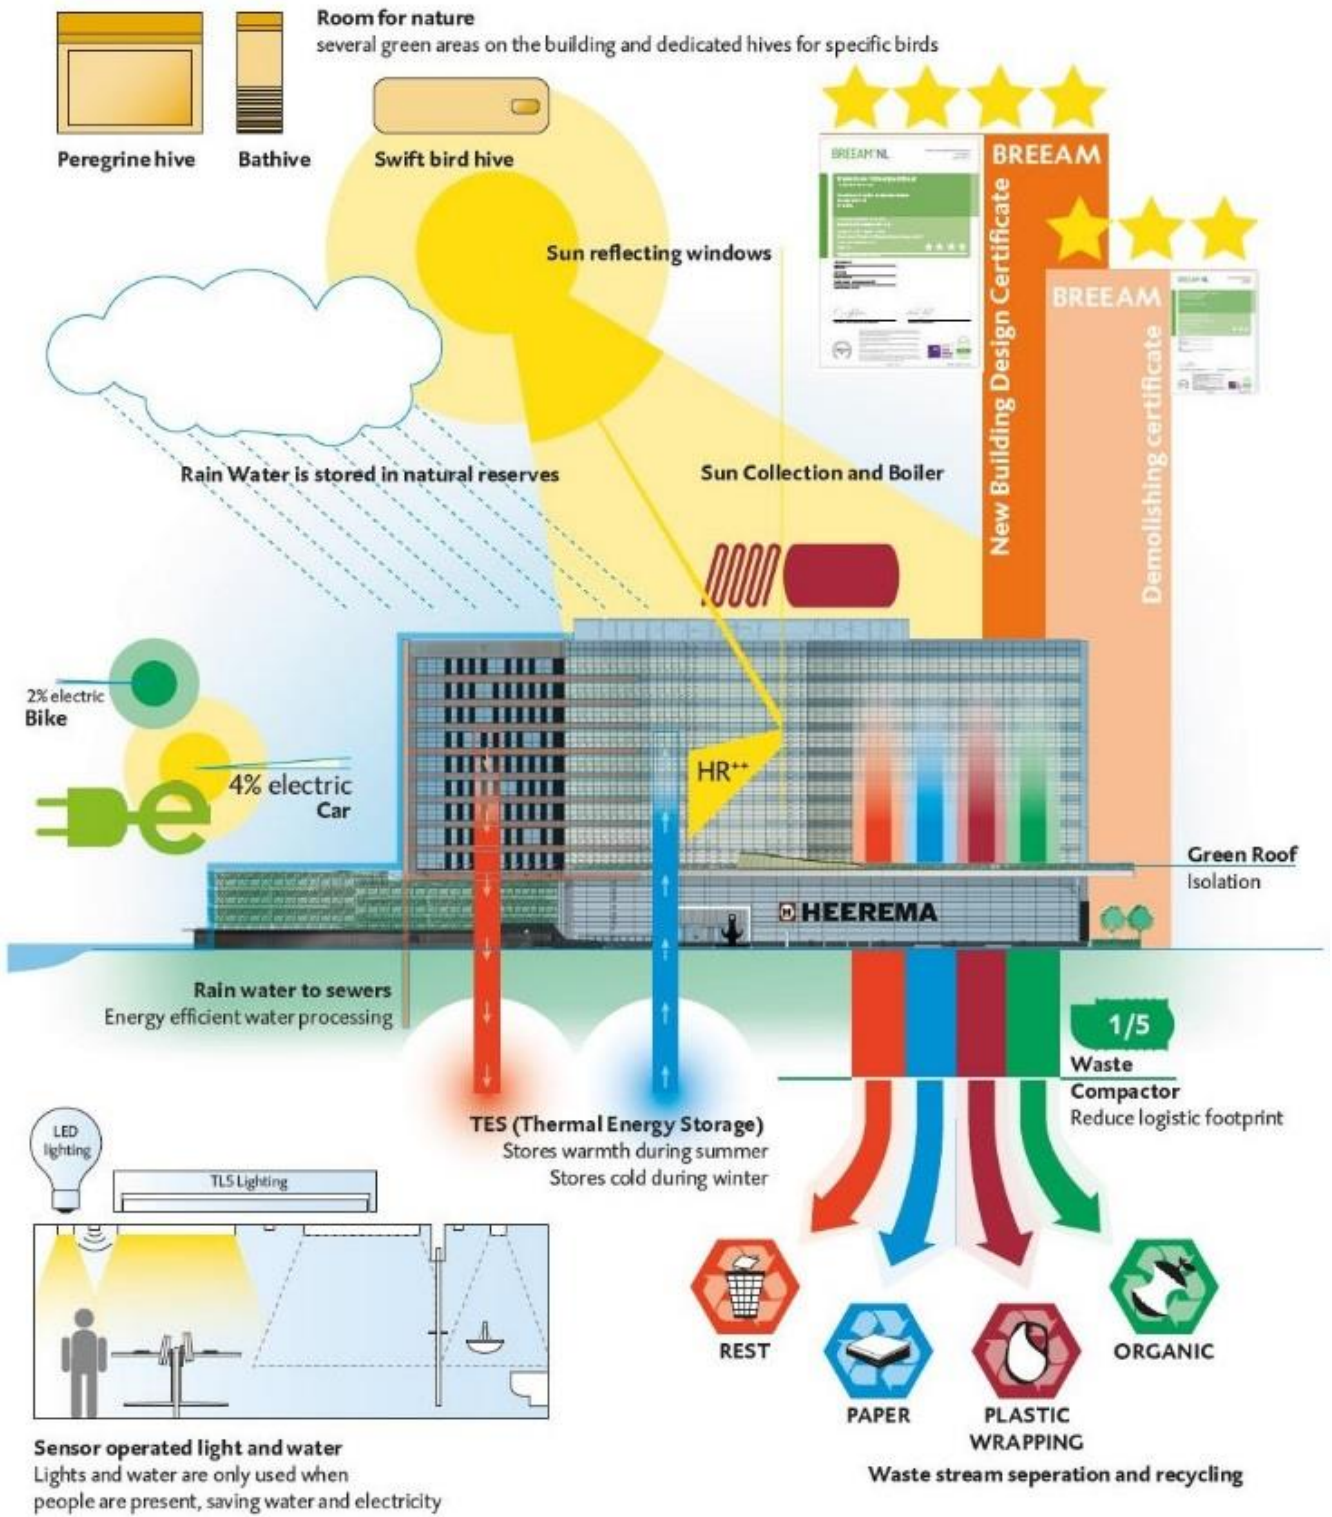

Top 15 Greenest Buildings in 2016

A 2016 report from the world green building council - Health, Wellbeing and Productivity in Green Offices - highlighted the global momentum behind healthy and green office design and operation. One of the examples in this report was the main office of Heerema in Leiden. The 12-story global headquarters for Heerema significantly raised the satisfaction of its 1,100 employees, by improving air quality, increasing thermal comfort and maximizing daylight. HMC expects to realize a

net present value of €42 million over 20 years in productivity, staff retention and reduced absenteeism. Other measures to reduce the environmental footprint in the office include a sun collection and boiler, Thermal Energy Storage (TES), waste stream separation and recycling, green roofs, open floor spacing plan with an abundance of natural lighting and electrical car and bicycle opportunities.
